

For our TE6HD, TE10HD and W10HD mass finishing systems we can offer a matching "trolley" workstation. The machine, process media, separation and process fluid are well organized and quickly available.

Equipped with solid handles and locking wheels, the trolley can be set up flexibly and safely anywhere with a space requirement of less than 1m<sup>2</sup>.

The design also allows the storage of abrasives in easy-to-handle plastic boxes and two 20-litre canisters for process and waste water.

Ergonomic working conditions are ensured by the adjustment possibility of the machine working height adapted to the operator as well as an additional work surface for handling the workpieces.

The trolley is an allrounder in the field of mass finishing equipment accessories. Whether small workroom or production island within a production hall, the trolley finds its place and is immediately ready for use.
